DISCOVER THE WORLD OF **SATTLER**

SATTLER
DESIGN SELECTOR

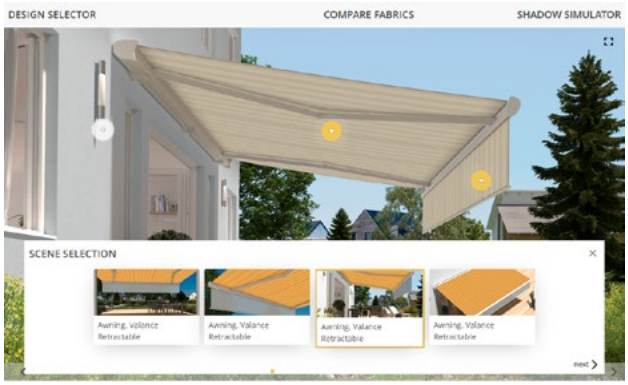

In our **collection book "World of Sattler"** you will find all our current fabric designs sorted by lines of design or by colors to provide a first impression of the appearance and structure of the fabrics. The **Design Selector** will additionally guide you through the applications for these fabrics. Regardless of the system, what matters is to gain a first impression of how the fabric will look like when installed. This is easy and simple with the Design Selector. You can access the collection and the Design Selector with your cell phone or tablet, **both are available online.**

This is how it works: scan the code on the front page of the collection (with a QR Reader or cell phone camera), start the application, click on the 'QR Code button' and scan the QR code next to the fabric. Now you can see the fabric in a **real scene** and you can modify it at your convenience. And if you want to know more about each of the designs, qualities and technical values, just click on the **info button** and all relevant contents and explanatory videos will be available for download.

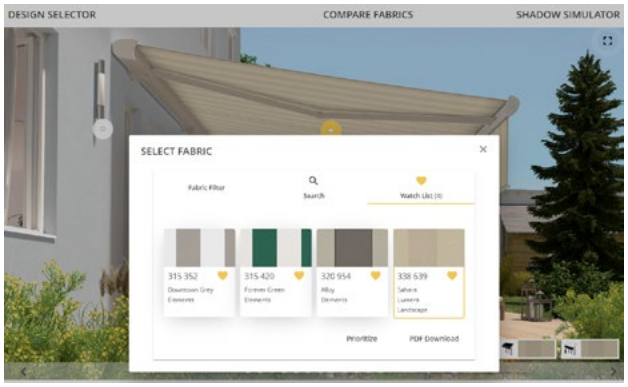

For more information go to
suntex.sattler.com

SATTLER'S DESIGN SELECTOR WILL HELP YOU WITH THE **PRESELECTION** OF YOUR FAVORITE FABRIC **QUICKLY AND RELIABLY**

Filter, compare, decide and send an inquiry: four simple steps to find the fabric that will embellish your terrace for many years. You will enjoy your Sattler awning for a very long time. This is why it is particularly important to **make the right choice**!

Are you looking for a specific color? Or a particular design? Or you just want a fabric that allows you to sit outside even if it starts to rain?

With **SATTLER's Design Selector** you will find what you are looking for. And thanks to the shadow simulator you will be able to estimate the right dimensions of your awning and to sit under the shade whenever you want.

+ ADVANTAGES AT A GLANCE

- Easy and intuitive filter features
- Possibility to adjust the color of the house for more individuality
- Shadow simulator to support your choice
- Integrated dealer inquiry
- Possibility to share via WhatsApp or email
- Use everywhere as mobile APP

SUN
PROTECTION FABRICS

ACRYLIC STAPLE FIBER

A large number of fine acrylic fibers are spun together during the production of **staple yarn**. The result is a highly resistant fabric with a textile surface perfectly suitable to be used outdoors for sun protection.

CBA

The use of the **Clean Brilliant Acrylic** yarn results in a smoother and denser surface structure of the fabric thanks to its outstanding properties. The innovative acrylic yarns are very smooth and therefore colors have a particularly intense and bright appearance.

ELEMENTS

100%
ACRYLIC STAPLE FIBER

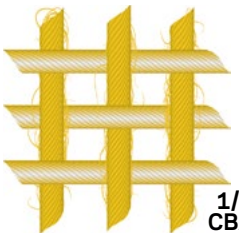

The **ELEMENTS quality** scores with its fine textile character. Textured staple fiber acrylic yarns are woven together in the warp and weft, which results in a surface with unique haptic effects. All our sun protection fabrics are covered with our special **TEXgard Easy Clean Finish** for weather protection which makes the fabrics perfect for their use outdoors.

LUMERA

2/3
ACRYLIC STAPLE FIBER

1/3
CBA

The characteristic feature of our **LUMERA quality** line is the **smooth surface** created by combining staple fiber in the warp and brilliant acrylic yarn CBA (Clean Brilliant Acrylic) in the weft. The use of these fibers results in a **smoother and denser** fabric structure. Colors shine even more and the fabric's self-cleaning effect improves ensuring its durability.

TEXgard EASY CLEAN –
Lifelong Protection for Your Awning Fabric

ENSURES A **LASTING IMPRESSION** OF YOUR AWNING FABRIC.

Just like a warm embrace, our TEXgard Easy Clean finish surrounds every single fiber of the fabric. This creates an invisible protection that purposely prevents water and dirt from penetrating the fabric.

The lotus effect transforms into the **TEXgard effect**. Pearls formed by moisture roll off the surface and wash away dirt particles. Thanks to this self-cleaning effect the fabric maintains its appearance and will look exactly the same after many years.

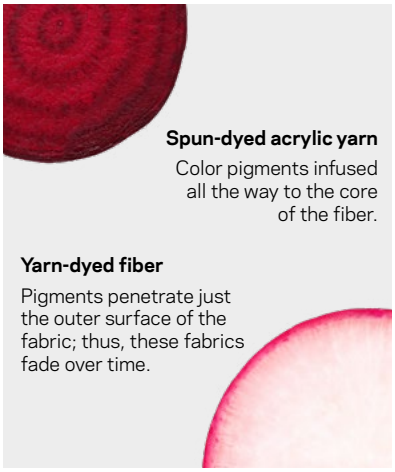

PAN – the Basis for the Best Sun Protection

THE PERFECT BASE: COLORS ARE DIRECTLY INFUSED INTO THE CORE OF THE ACRYLIC YARNS, AS A RESULT OF THE SOLUTION-DYE PROCESS

There is nothing better than consistent quality. All fabrics in the "World of Sattler" collection are woven from **100% solution-dyed brand acrylic**. This means that color pigments are infused into the fiber before they are spun into yarn.

This results in **uniformly dyed yarns, resistant to harmful UV rays for a long time**, thus retaining their color brilliance for years. In the next processing stage, outstanding fabrics are woven from solution-dyed acrylic fibers.

Our fabrics are exceptionally durable and retain their vivid colors, even after exposure to numerous hours of sun. Quality is present in every single fiber. This makes the difference that you can see and feel. Due to the **textile character**, our fabrics feel pleasantly warm and soft.

SUN PROTECTION IS ALSO CLIMATE **PROTECTION**

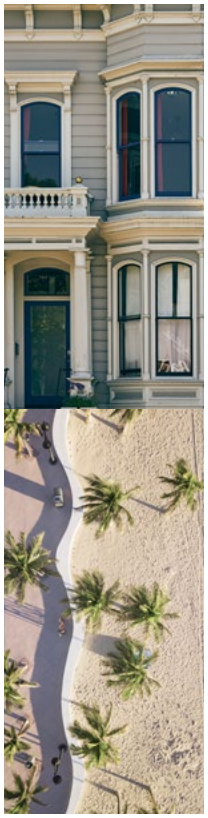

Some examples of our sustainable actions:

- 100 % green electricity generating a large part of our own power demand through photovoltaic systems
- energy-optimized washing and impregnation processes
- no use of surfactants
- modern machines, which save 15 % of the water consumption previously needed

REGIONAL DESIGN

REGIONAL IDENTITY – REFLECTED IN SATTLER'S DESIGNS

The unique interplay of light and shade, nature, climate, architecture and colors in all possible intensities – every region has its own special characteristics and charms. But how can these characteristics be reflected in designs? This is exactly the question we deal with when it comes to design and product development of fabrics for new collections.

Sattler's awning designs represent a reflection of our world. This is why fabrics are not just textiles. Each fabric is a precise snapshot of the environment surrounding us. The great art of this process is to recognize and abstractly perpetuate the identity and dynamics of each region.

For the composition of colors and materials, we use the regional characteristics as basis and respond to consumer demands from different parts of the world. This is how our special country collections emerge.

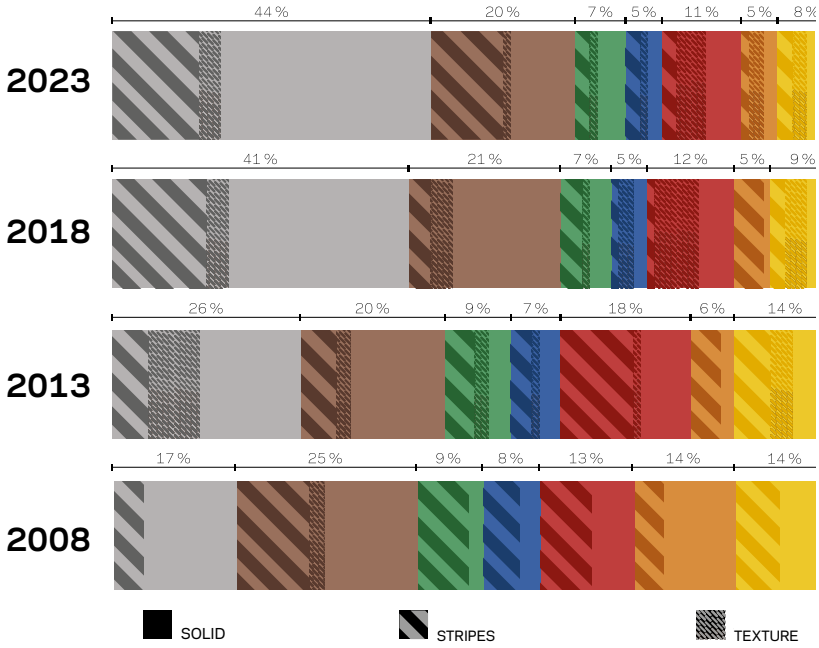

COLOR & DESIGN **TRENDS**

HOW DO **TRENDS** DEVELOP?

The development of our designs is the sum of extensive and thorough research combined with the latest results of trend analysis and a great deal of creativity.As part of the design development, we focus on signs of the times and also analyze social trends in detail. Our designers identify future trends in cooperation with internationally recognized trend agencies.
They are inspired by nature, architecture, arts and crafts – they get further influences from the past and early historical developments. We want to bring yesterday's spirit together with the trends of tomorrow to invoke extraordinary interpretations.

UV PROTECTION
FOR YOUR HEALTH

UV PROTECTION: SUNNY AND SHADY SIDES

Sunlight is important for health. The right amount has plenty of positive effects, but at the same time it can have harmful effects on our body. Sunlight is composed of visible, infrared and ultraviolet light. Ultraviolet light, on the one hand, is composed of UVA and UVB rays. The high-energy UVB rays attack the pigment-forming cells in the upper skin layer causing sunburn, skin damage or even cancer. UVA rays have a longer wavelength and penetrate deeper in the skin damaging the connective tissue and leading to faster aging.

The UV value calculated by an independent testing institute indicates how much of the harmful UV rays can be blocked by sun protection textiles thus they cannot reach the skin.

Uncompromising, outstanding protection against UV-rays

All our fabrics are regularly tested and certified according to **UV Standard 801**. This means they are not only tested when new, but also after exposure to the most diverse, real conditions such as extreme sun exposure, as well as in a wet or stretched state. This way we guarantee that **not more than 2.5 % of the harmful UV rays** pass through any of Sattler's fabrics.

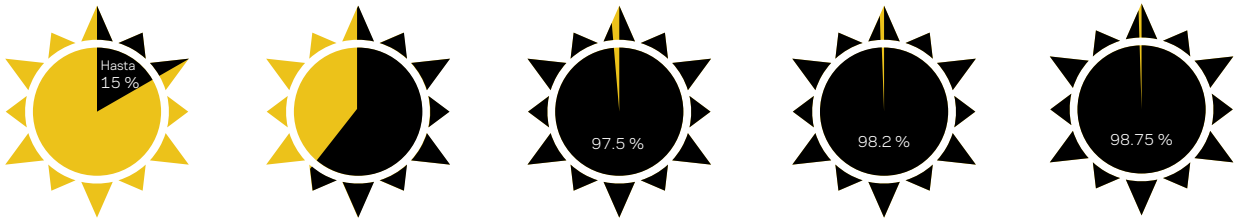

This characteristic is an expression of our proven quality:

What does the Ultra Violet Protection Factor stand for?

The UPF is a special orientation value for textiles, similar to the SPF used for sunscreen. With a value range from 2 to 80, this factor helps to estimate how long the certified sun protection textile will increase the sun protection of human skin directly exposed to sun rays. This self-protection time depends on the skin type.

UV PROTECT CERTIFIED min. 97.5%

Learn more in our **video on YouTube**.

Shade under a tree **UPF factor 5**

White cotton t-shirt **UPF factor 10**

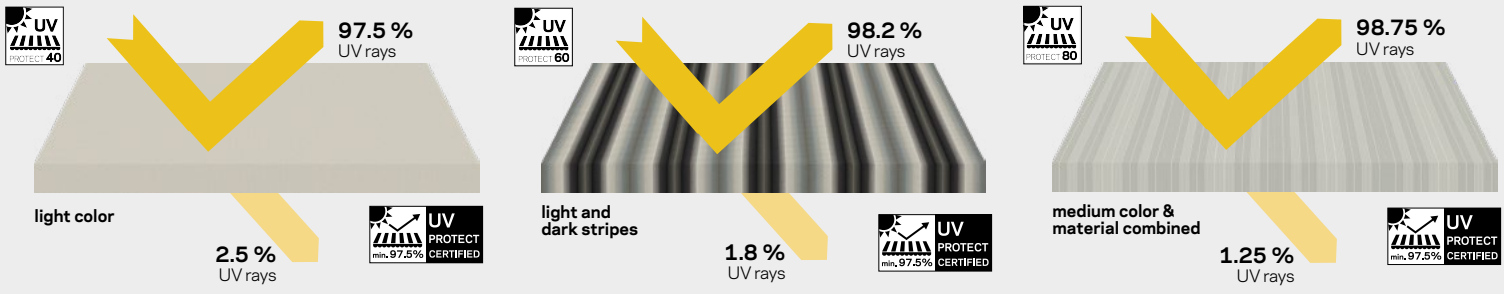

Sun protection textile **UPF factor 40**

Sun protection textile **UPF factor 60**

Sun protection textile **UPF factor 80**

WHAT DOES THE UPF DEPEND ON?

For fabrics, material, density and color determine the level of UPF value.

QUALITY
LUMERA

No light, no color. With LUMERA, colors shine under a different light.
Light surrounds us day and night. Be it bright sunshine, moonlight or the great variety of colors of the artificial lighting in the city and countryside. The smooth surface adds brightness to the fabrics that form Lumera's quality; its luminosity is reflected in our special designs.
